

Macson Farm Mesh (Website New product)

Macson Farm Mesh is a highly versatile and cost-effective fencing solution tailored for a wide range of agricultural applications. Whether you're securing your crops, creating structured enclosures, or enhancing farm boundaries, this mesh delivers the durability and flexibility needed on the field. Made with hot-dip galvanized steel, it offers excellent resistance to harsh weather, making it a long-lasting and low-maintenance option.

Its lightweight structure and flexible design allow for quick and hassle-free installation. Each roll comes in a 15-meter length and a height of 1.05 meters, with a 12-gauge (2.5mm) wire thickness for reliable strength. The mesh features a graduated opening pattern, starting at 60mm near the base and gradually increasing to 100mm and 150mm towards the top. This pattern ensures secure protection where it matters most, while also improving air circulation and sunlight exposure for plant growth.

Macson Farm Mesh supports a variety of uses on the farm—from safeguarding crops and trees to supporting greenhouses, vertical farming, and more. With its strong build, ease of use, and efficient design, it's an ideal solution for modern agricultural needs.

Common Application:

- Protecting crops from animals such as wild boar, rabbits, porcupines, and cattle
- Creating tree and plant guards
- Perimeter fencing for farms, estates, and plantations
- Supporting greenhouse frames and vertical farming systems
- Structuring walkways and plant rows
- Building cages and enclosures for poultry and small animals
